

Pediatric Genetics - Inpatient Consults

1. Place official consult in EMR

To best serve you and expedite the evaluation of your patient, please include:

- a brief description of the patient to include the findings/diagnoses and clinical context
- the specific request for service (e.g., evaluate for genetic condition, provide genetic counseling, provide management recommendations)

2. Notify the on call physician (Trapane or Labilloy)

- Include contact name and call back number to discuss consult
- Include MRN/name/location so that team may review prior to phone discussion
- State if this is Emergent / Urgent / Non-urgent
- Do NOT contact the APRN - The on call physician will involve an APRN or trainee as appropriate

NOTE: the consulting team has only 24 hours to complete the consult per hospital compliance – placing the consult in the EMR and notifying the on call physician should be concurrent

TelemedIQ		*preferred method of contact*
------------------	---	--------------------------------------

To install and activate the TelemedIQ app: Contact Baptist IT support at 202-2763

If you do not have the TelemedIQ app, you may use
