Emergency Resources Group to Staff Lakeland Regional Medical Center Emergency Department

LPMC physicians to join ERG in providing additional health care to Florida communities

LAKELAND, Fla. August 2022 – Emergency Resources Group (ERG) announced a partnership today with Lakeland Regional Medical Center (LRMC). ERG’s emergency physicians will now staff the hospital’s emergency department, the second busiest department in the country. ERG will provide critical care management for patients throughout their medical journey. The physicians who previously staffed the LRMC emergency department will join ERG, further strengthening the group’s longstanding status as an essential medical resource in communities throughout the region.

“The most important part of this partnership is the far-reaching impact it will have on patients,” said ERG CEO Dr. Matthew Rill. “ERG is proud to serve those directly in central Florida through LRMC and additional patients in the diverse communities in which ERG has established a footprint in.”

ERG will staff both the adult and pediatric emergency departments. According to Becker’s Hospital Review, LRMC saw nearly 200,000 emergency department cases in 2021, second only to Parkland Health and Hospital System in Dallas.

“We are excited that the physicians who have staffed our emergency centers will continue to provide that service, now these physicians are backed and managed by ERG, which has a legacy of providing high quality, highly satisfying, innovative emergency services in this region” said LRMC President Dr. Tim Regan, an emergency physician himself.

ERG’s team of physicians have, for more than 40 years, provided critical health care in communities in Florida and Georgia. The group’s experience is in multiple specialties including emergency medicine, pediatric emergency medicine, family medicine, pediatrics, wound care, and assistance with Advanced Practice Providers (APC’s). The group also has physicians who specialize in [telemedicine](#) and provide care coordination resources to businesses and nonprofits.

For more information on ERG and it’s growing impact on local communities, visit their website at www.ergjax.com.
